PROFILE

Product-minded engineer with 11 years delivering complex technical systems, including 3 owning end-to-end software product delivery. I ship tools and platforms used across global teams - taking products from discovery through to live operations and staying accountable for what happens after launch. I can read an API spec, write a data pipeline, and translate both into a customer support process that works on day one.

WORK EXPERIENCE

Integration Engineer *RLE International* *Sep 2025 – Mar 2026*

- Reduced weekly reporting lag from days to minutes by owning full delivery of an automated KPI dashboard and Excel-based tracker - consolidating multiple data sources into a single Power BI view used in program reviews at Ford.

Digital Engineering Specialist *RLE International* *Jan 2023 – Jul 2024*

- Owned the full product lifecycle - roadmap, backlog, Scrum delivery, and post-launch operations - for a suite of project tracking and financial reporting tools adopted across 6 global regions, eliminating more than 14 days of manual work per team per year and increasing reporting accuracy for senior management.

Digital Engineering Developer *RLE International* *Jul 2022 – Jan 2023*

- Delivered a full-stack MVP that validated a new multiple-objective optimisation approach with pilot users, reducing DVP planning time by more than 80% and securing stakeholder funding for further development.

Data Management Analyst *RLE International* *Jul 2019 – Jul 2022*

- Acted as the product translation layer on SDP - a web platform used across multiple customers to develop scalable automotive program timing plans - gathering requirements from domain experts, defining data structures, and bridging the gap between operational needs and engineering execution.

Technical Product Owner & Developer *Dorkinians FC* *Oct 2016 – Present*

- Founder, product owner and sole developer for a live football stats platform with 600+ users. Ran continuous discovery using Umami analytics to prioritise features, shipped a graph-database chatbot for user engagement, and maintained full operational responsibility for uptime and data quality.

Project Engineer *RLE International* *Sep 2014 – Jul 2019*

- Closures and Exteriors engineer across clients including McLaren, Ford and Dyson, taking concept designs to production through change management for low and high production builds and managing global supplier networks.
