PROFILE

Product-minded engineer with 11 years delivering complex technical systems, including 3 owning end-to-end software product delivery - from discovery and backlog management through to live operations and post-launch accountability. Recent work includes a 600+ user statistics platform with continuous discovery-led roadmapping, and automated KPI dashboards shipped into weekly senior leadership reviews at Ford. Combines hands-on data skills (SQL, Python, Power BI) with structured product thinking to drive measurable operational outcomes. Actively seeking Product Associate, Analyst or Delivery Lead roles in the UK.

WORK EXPERIENCE

Integration Engineer *RLE International* *Sep 2025 - Mar 2026*

- Owned full delivery of an automated KPI dashboard consolidating multiple data sources into a single BI view - reducing weekly reporting lag from days to minutes for programme reviews at Ford Motor Company.
- Designed and built the Python data pipeline underpinning the dashboard, automating ingestion from multiple source systems and removing the need for manual cross-system data collation by the programme team.

Career Break *Aug 2024 - Sep 2025*

- Extended travel across 19 countries; used the break to reset career direction toward product and software delivery.

Digital Engineering Specialist *RLE International* *Jan 2023 - Jul 2024*

- Owned the full product lifecycle - roadmap, backlog, Scrum delivery, and post-launch operations - for a suite of project tracking and financial reporting tools adopted across 6 global regions, eliminating more than 14 days of manual work per team per year and increasing reporting accuracy for senior management.
- Led sprint planning and backlog refinement across concurrent workstreams in Azure DevOps, balancing competing priorities from 6 regional stakeholder groups and coordinating releases across a globally distributed user base.
- Launched a Docusaurus-based documentation site to standardise SDLC processes across engineering teams - reducing knowledge silos and giving teams a single source of truth for backlog workflows, feature releases, toolset guidance, and delivery standards.

Digital Engineering Developer *RLE International* *Jul 2022 - Jan 2023*

- Delivered a full-stack MVP validating a multiple-objective optimisation approach with pilot users, reducing DVP planning time by over 80% and securing stakeholder funding for further development.
- Ran iterative user testing sessions to refine the tool before sign-off, demonstrating end-to-end product ownership from technical architecture through to stakeholder approval - without a formal product manager in the team.

Data Management Analyst *RLE International* *Jul 2019 - Jul 2022*

- Acted as the product translation layer on SDP - a web platform used across multiple customers to develop scalable automotive program timing plans - gathering requirements from domain experts, defining data structures, and bridging the gap between operational needs and engineering execution.
- Built a custom Excel interface enabling non-technical stakeholders to input and manage structured graph data directly into the system - removing developer dependency from routine data operations and increasing adoption across the customer base.
- Defined and maintained data structures across SQL and Neo4j databases over a 3-year delivery, collaborating with engineering teams to ensure the platform scaled across multiple customer deployments.

Technical Product Owner & Developer *Dorkinians FC* *Oct 2016 - Present*

- Founder, product owner and sole developer for a live football stats platform serving 600+ active users - running continuous discovery via Umami event analytics to prioritise the roadmap, and maintaining full operational responsibility for uptime, data quality, and user support.
- Shipped a Neo4j graph-database chatbot for performance insights, built live data pipelines from match data through to the front end, and maintained platform reliability through automated E2E testing with Playwright - owning the full technical stack without a team or budget.

Project Engineer *RLE International* *Sep 2014 - Jul 2019*

- Delivered hardware solutions from concept to production across McLaren, Ford and Dyson - including a rear door hinge weight reduction at Ford saving over $8m across the vehicle lifetime. Built Excel-based project tracking tools adopted by wider engineering teams to improve planning visibility.

Additional Experience: Litigation Support Officer / Bug Tester - *Opus 2 International* (*Mar 2011 - Jul 2014).* **Technical Consultant (voluntary)** - *Wyburns Primary School (Sep 2025 - Mar 2026)* - Process automation and website improvements, including a Google Sheets-to-Word sync eliminating manual data copying across year groups.

PROJECTS

Affordability Snapshot Tool *Mar 2026*

- Built an MVP affordability analysis pipeline using Open Banking API data to assess income, spend and repayment capacity - demonstrating product thinking applied to fintech data structures and generating a structured decisioning report.
- *Tech: Python, Flask, HTML, Claude API*

Dorkinians Website V3 *Aug 2025 - Jan 2026*

- Stats and performance insights platform for a 600+ member football club, featuring an integrated graph-database chatbot, live data pipelines, and analytics-informed feature development.
- *Tech: Next.js, React, Neo4j, TypeScript, Umami, Playwright, Google Cloud, Netlify*

EDUCATION

2011 – 2014
Loughborough University
BEng. Automotive Engineering. Second Class Honours, Upper Division (2:1)

2009 – 2011
Ashcombe Sixth Form College
3 A Levels; Mathematics (A), Physics (A), History (A) and an AS Level in Economics (A)

LANGUAGES

- **English** (Native)
- **Spanish** (Intermediate)
- **German** (Basic)
